TRUSTERS

ELVT5350.

LOW-PROFILE SCISSOR LIFT FOR
CARS, SUVS, VANS

BLACK EDITION

MINIMAL. MAXIMUM.

ELVT5350 - COMPACT ON THE GROUND. STRONG AT HEIGHT.

The TRUSTERS ELVT5350 low-profile scissor lift is designed for workshops that want to service vehicles safely, comfortably and with minimal footprint. With a load capacity of 3,500 kg, it reliably raises cars, SUVs and light vans to a working height of up to 1,930 mm – ideal for inspections, tyre service, maintenance work, and work on the suspension and underbody.

The redundant double master-slave hydraulic system moves both platforms evenly and in sync. One-sided lifting or lowering is actively prevented, ensuring safe and stable operation at all times. Additional mechanical safety latches are not required. The integrated height limit switch also reliably protects the lift from exceeding the maximum lifting height.

With a minimum height of just 105 mm, the ELVT5350 impresses with its especially flat low-profile design. As a result, it can be installed directly on a level, sufficiently load-bearing concrete floor, without the need for a pit. The low drive-on height also makes it easy to accommodate sports cars and lowered vehicles. Rubber pads included as standard protect the vehicle underbody and allow secure loading at the designated lifting points.

Operation is conveniently handled via the separate, lockable control unit in black TRUSTERS design. The mature hydraulic system raises the vehicle to the desired working height in a maximum of 50 seconds. With a noise level of no more than 75 dB, the lift operates pleasantly quietly. The 230 V connection allows for straightforward power supply in numerous workshops and home garages.

The ELVT5350 creates optimal conditions for ergonomic work across the entire vehicle underbody. Its combination of 3,500 kg load capacity, 1,930 mm lifting height and especially flat design makes it a versatile solution for professional automotive workshops, bodywork shops and dedicated home mechanics. Rugged TRUSTERS quality, reliable hydraulic technology and a compelling price-performance ratio make it a strong long-term investment.

TECHNICAL DATA

LOAD CAPACITY	3,500 kg
MAX. LIFTING HEIGHT	1,930 mm
MIN. HEIGHT (RETRACTED)	105 mm
OVERALL LENGTH	2,105 mm
PLATFORM LENGTH	1,485 mm
PLATFORM WIDTH (EACH)	660 mm
OVERALL WIDTH	2,220 mm
CLEAR WIDTH	900 mm
LIFTING TIME	≤ 50 sec.
LOWERING TIME	≤ 20 sec.
VOLTAGE	230 V / single-phase
NOISE LEVEL	75 dB
DEAD WEIGHT	887 kg

4 RUBBER PADS AS STANDARD
Reliably protect the vehicle underbody

105 MM LOW PROFILE
Can be installed flush with the floor. Lowered vehicles and sports cars drive on without any problem.

SEPARATE, LOCKABLE CONTROL UNIT.
Convenient lifting and lowering at the push of a button, with the emergency-stop button always in view.

AUTOMATIC LIFTING-HEIGHT LIMITER
Height limit switch prevents exceeding the maximum lifting height

DOUBLE MASTER-SLAVE HYDRAULIC SYSTEM
With dual safety interlock: synchronised travel with double the safety

ESPECIALLY LOW NOISE LEVEL
At a maximum of 75 dB, the lift supports a more pleasant working environment in the workshop.
