

LIBRA2700.

TIRE BALANCING MACHINE 10" - 28"
CAR, MOTORCYCLE

BLACK EDITION

COMPACT & SMART

LIBRA2700

Despite its slim dimensions, the LIBRA2700 is a versatile balancing machine for small to medium-sized workshops, even where space is limited. It reliably balances tires with a rim size of 10" - 28".

The LIBRA2700 is of course suitable for balancing steel and aluminum rims in a wide variety of designs; it has 8 different programs. There is always a suitable program here! The corresponding values for the wheel to be balanced are entered via the display; the push buttons can be operated safely even when wearing gloves. After measuring, the unbalance values are clearly shown on the display.

Equipped with 4 balancing cones of different sizes, you will find the right size for every rim with a center hole. The quick-release nut helps you work quickly and has a firm grip on the rim. The LIBRA2700 automatically starts the balancing process as soon as the wheel arch is lowered. It only takes 7 seconds for the balancing process and then automatically brakes the wheel to a standstill.

With the LIBRA2700 you have a reliable partner at your side for daily use. With its stylish black design, it not only enhances your workshop visually.
